MATEMATIKA, IQTISOD, PEDAGOGIKA VA PSIXOLOGIYANING YANGI
YONDASHUVLARI**
mavzusidagi Respublika ilmiy-texnik anjuman materiallari to‘plami
(2026-yil 20-21-aprel)

JIZZAX-2026

Raqamli jamiyatda fan va ta’limning integratsiyalalashuvi: matematika, iqtisod, pedagogika va psixologiyaning yangi yondashuvlari. Respublika ilmiy-texnik anjuman materiallari to’plami – Jizzax: O‘zMU Jizzax filiali Amaliy matematika kafedrası, 2026-yil 20-21-aprel 505-bet.

Respublika miqyosidagi ilmiy-texnik anjuman materiallarida zamonaviy kompyuter ilmlari va muhandislik texnologiyalari sohasidagi innovatsion tadqiqotlar aks etgan.

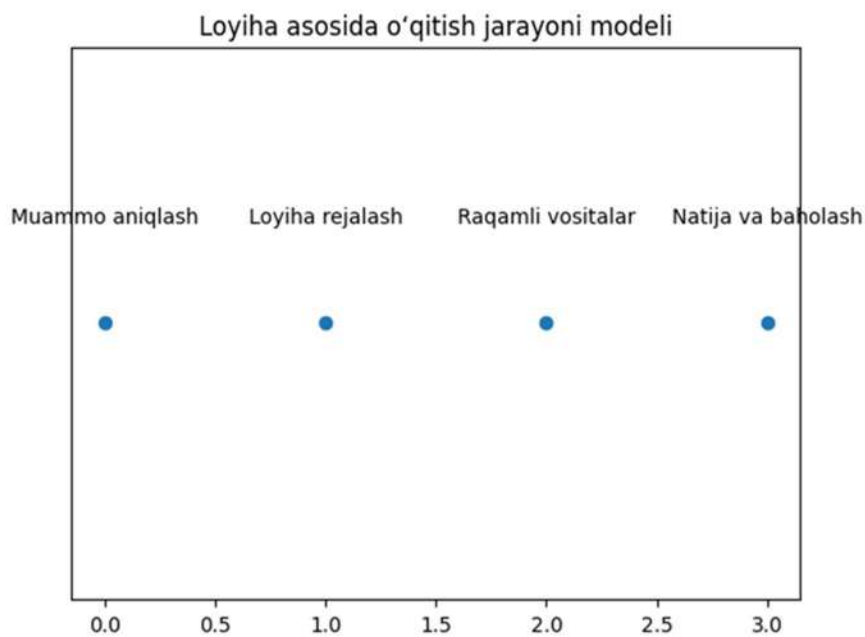

Globalashuv sharoitida davlatimizni yanada barqaror va jadal sur’atlar bilan rivojlantirish bo’yicha amalga oshirilayotgan islohotlar samarasini yaxshilash sohasidagi ilmiy-tadqiqot ishlariga alohida e’tibor qaratilgan. Zero iqtisodiyotning, ijtimoiy sohalarini qamrab olgan modernizatsiya jarayonlari, hayotning barcha sohalarini liberallashtirishni talab qilmoqda.

Ushbu ilmiy ma’ruza tezislari to’plamida mamlakatimiz va xorijlik turli yo’nalishlarda faoliyat olib borayotgan mutaxassislar, olimlar, professor-o’qituvchilar, ilmiy tadqiqot institutlari va markazlarining ilmiy xodimlari, tadqiqotchilari, magistr va talabalarning ilmiy-tadqiqot ishlari natijalari mujassamlashgan.

Mas’ul muharrirlar: DSc.prof. Turakulov O.X., t.f.n., dots. Baboyev A.M.

Tahrir hay’ati a’zolari: p.f.d.(DSc), prof. Turakulov O.X., t.f.n., dots. Tovboyev, t.f.n., dots. Baboyev A.M., t.f.f.d.(PhD), prof. Abduraxmanov R.A., p.f.f.d.(PhD) Eshankulov B.S., p.f.n., dots. Alimov N.N., p.f.f.d.(PhD), dots. Alibayev S.X., t.f.f.d.(PhD), dots. Abdumalikov A.A., p.f.f.d.(PhD) Hafizov E.A., f.f.f.d.(PhD), dots. Sindorov L.K., t.f.f.d.(PhD), dots. Nasirov B.U., b.f.f.d. (PhD) O’ralov A.I., p.f.n., dots. Aliqulov S.T., t.f.f.d.(PhD) Kuvandikov J.T., i.f.n., dots. Tsoy M.P., Sharipova S.F., Jo’rayev M.M.

Mazkur to’plamga kiritilgan ma’ruza tezislarning mazmuni, undagi statistik ma’lumotlar va me’yoriy hujjatlarning to’g’riligi hamda tanqidiy fikr-mulohazalar, keltirilgan takliflarga mualliflarning o’zlari mas’uldirlar.

2-rasm. Loyiha asosida o’qitish jarayonining modeli.

Xulosa

Loyiha asosida o’qitish va intellektual ta’lim texnologiyalarini integratsiyalash texnologiya ta’limi samaradorligini oshiradi. Ushbu yondashuv talabalarning texnik ijodkorlik salohiyatini rivojlantirib, ularni zamonaviy kasbiy faoliyatga tayyorlashga xizmat qiladi.

ASSESSING RETAIL TRADE EFFICIENCY BASED ON STATISTICAL INDICATORS

Gaybullayev Sarvar Oktam ogli

Independent Researcher at Termez State University

gaybullayevsarvar674@gmail.com

Abstract: This study investigates the assessment of efficiency in the retail trade sector using statistical indicators. The research develops a comprehensive framework that integrates key performance measures such as sales turnover, profitability, cost efficiency, labor productivity, and inventory turnover. Using quantitative methods, including descriptive statistics, correlation analysis, and regression approaches, the study identifies the main determinants of retail efficiency. The findings suggest that retail performance is a multidimensional phenomenon influenced by both internal management practices and external market conditions. The study contributes to the

literature by providing a structured statistical approach to efficiency evaluation and offers practical recommendations for improving retail performance through data-driven decision-making.

Keywords: retail trade, efficiency, statistical analysis, econometrics, profitability, inventory management, performance indicators, data-driven decision making

Retail trade plays a pivotal role in modern economies as a key intermediary between production and final consumption. It ensures the distribution of goods to end users and significantly contributes to economic growth, employment generation, and fiscal revenues. In developing and transition economies, the retail sector also acts as a driver of small business development and regional economic integration.

In recent years, the retail landscape has undergone profound transformations due to globalization, technological advancements, and changes in consumer behavior. The rapid expansion of e-commerce, digital payment systems, and logistics innovations has fundamentally reshaped traditional retail operations. These developments have increased the complexity of managing retail enterprises and, consequently, the importance of accurately evaluating their efficiency.

Traditional performance evaluation methods often rely on single indicators such as revenue or profit. However, such approaches fail to capture the multidimensional nature of efficiency in retail systems. Modern analytical frameworks emphasize the importance of integrating multiple statistical indicators to provide a comprehensive assessment of performance.

Therefore, the primary objective of this study is to examine the role of statistical indicators in evaluating retail efficiency and to develop a systematic approach that can be applied in both academic research and practical business environments.

The concept of efficiency in retail trade has been widely explored in economic and management literature. Early studies primarily focused on financial performance indicators, particularly profit and sales volume, as the main measures of success. However, subsequent research expanded this perspective by incorporating operational and strategic dimensions.

Kotler and Keller (2016) emphasize that retail performance should be evaluated not only in terms of financial outcomes but also through customer satisfaction, market share, and brand positioning. Porter (2008) highlights the importance of competitive advantage, arguing that efficiency is closely linked to a firm’s ability to optimize its value chain and strategic positioning.

From an econometric perspective, Gujarati (2004) and Wooldridge (2015) provide methodological foundations for analyzing economic relationships using statistical models. Their work demonstrates how regression and correlation analysis can be used to identify key drivers of performance in various sectors, including retail.

More recent studies focus on the role of digitalization and big data in retail analytics. According to OECD (2020), the integration of real-time data systems and predictive analytics significantly enhances decision-making processes and operational efficiency in retail businesses.

Overall, the literature suggests that retail efficiency is a complex, multidimensional construct that requires a combination of financial, operational, and analytical indicators for accurate assessment.

This study adopts a quantitative research design based on statistical and econometric analysis. The approach combines theoretical modeling with applied analytical techniques to ensure a comprehensive evaluation of retail efficiency.

- **Object of study:** Retail trade enterprises
 - **Scope:** Statistical indicators reflecting efficiency and their interrelationships
- The study focuses on the following key indicators:
- Sales turnover (total revenue from goods sold)
 - Profitability (relationship between profit and costs)
 - Operational costs (expenses related to business activities)

- Labor productivity (output per employee)
- Inventory turnover (efficiency of stock utilization)
- Space utilization efficiency (sales per unit of retail area)

These indicators collectively provide a multidimensional perspective on retail performance.

The following statistical techniques are employed:

- **Descriptive statistics** to summarize and interpret central tendencies and dispersion
- **Time-series analysis** to examine trends and growth patterns over time
- **Correlation analysis** to identify relationships between key variables
- **Regression analysis** to determine causal effects and quantify the impact of explanatory variables

This combination of methods ensures both descriptive and inferential insights into retail efficiency.

The empirical analysis reveals that retail efficiency is influenced by several interrelated factors.

First, sales turnover demonstrates a strong positive relationship with overall performance. However, increased sales do not always translate into higher profitability, particularly when accompanied by rising operational costs. This highlights the importance of cost control in maintaining efficiency.

Second, profitability emerges as a critical indicator of performance. Firms with higher profitability ratios tend to exhibit better resource allocation and management practices.

Third, inventory turnover plays a significant role in determining efficiency. High inventory turnover indicates effective stock management, reduced holding costs, and improved liquidity. Conversely, excessive inventory levels are associated with inefficiencies and increased operational risks.

Fourth, labor productivity shows a strong positive correlation with sales performance. Efficient workforce utilization contributes significantly to overall business success.

Finally, the analysis confirms a negative relationship between operational costs and profitability, emphasizing the need for cost optimization strategies.

The findings of this study are consistent with existing literature and provide additional empirical support for the multidimensional nature of retail efficiency. The results suggest that relying on a single performance indicator is insufficient for accurate evaluation.

Instead, a comprehensive approach that integrates multiple statistical indicators is necessary. In particular, the study highlights the importance of balancing revenue growth with cost control and resource efficiency.

The role of inventory management is especially noteworthy. Efficient inventory systems not only reduce costs but also improve customer satisfaction by ensuring product availability.

Furthermore, the adoption of modern analytical tools, including data analytics platforms and artificial intelligence, can significantly enhance decision-making processes in retail enterprises. These technologies enable real-time monitoring and predictive analysis, allowing firms to respond more effectively to market changes.

Based on the findings, several practical recommendations can be proposed:

- Implement data-driven management systems for real-time performance monitoring
- Optimize inventory levels using predictive analytics
- Reduce operational costs through process improvements
- Enhance labor productivity through training and performance management
- Adopt advanced analytical tools for strategic decision-making

These measures can significantly improve the efficiency and competitiveness of retail enterprises.

This study demonstrates that statistical indicators play a crucial role in assessing retail trade efficiency. The findings confirm that efficiency is a multidimensional concept influenced by various financial and operational factors.

The key conclusions are as follows:

- Retail efficiency requires a comprehensive evaluation framework
- Statistical analysis provides valuable insights into performance dynamics
- Effective resource management is essential for improving outcomes
- Data-driven approaches enhance decision-making and competitiveness

Future research should focus on applying advanced econometric models and real-world datasets to further refine the assessment of retail efficiency.

UMUMIY O’RTA TA’LIM MAKTABLARDA MATEMATIKA DARSLARIDA NOSTANDARD TENGLAMALARNI O’QITISHNING MAZMUNI VA VAZIFALARI.

Fayzullayev Musobek Tursunkul o’g’li

JDPU o’qituvchisi

fayzullaevmusobek@gmail.com

Annotatsiya: Ushbu maqolada umumiy o’rta ta’lim maktablarida matematika darslarida nostandard tenglamalarni o’qitishning mazmuni, metodik asoslari va didaktik ahamiyati tahlil qilingan. Nostandard tenglamalarni yechish orqali o’quvchilarning mantiqiy fikrlashi, ijodiy yondashuvi va matematik tafakkurini rivojlantirish imkoniyatlari yoritilgan. Shuningdek, maqolada nostandard tenglamalarni yechishning turli usullari — grafik tahlil, funksiyalar xossalariidan foydalanish, tengsizliklar yordamida baholash kabi metodlar misollar asosida ko’rib chiqilgan. Tadqiqot natijalari nostandard masalalardan foydalanish o’quvchilarning matematika faniga qiziqishini oshirishda samarali vosita ekanligini ko’rsatadi.

Abstract: This article analyzes the content, methodological foundations, and didactic significance of teaching non-standard equations in mathematics lessons at general secondary schools. The study highlights the role of non-standard equations in developing students’ logical thinking, creative approach, and mathematical reasoning. Various methods for solving such equations, including graphical analysis, the use of function properties, and inequality-based estimation, are discussed with examples. The results of the study show that the use of non-standard problems significantly increases students’ interest in mathematics and enhances their problem-solving skills.

Kalit so’zlar: nostandard tenglama, matematik model, grafik usul, tengsizliklar, algebra, matematik tafakkur, mantiqiy fikrlash, ijodiy yondashuv, metodika, matematika ta’limi.

Keywords: non-standard equations, mathematical modeling, graphical method, inequalities, algebra, mathematical thinking, logical reasoning, creative approach, methodology, mathematics education.

Har bir sohani ayniqsa texnikani, tevarak - atrofimizni o’rab turgan borliqni matematikasiz, hisob – kitoblarsiz tasavvur qilish mumkin emas. Inson misol va masalalar ustida bosh qotirar ekan
